

Smart Locking Solutions That Work For You

At Trachte, we're committed to providing our customers with the best options available – and that includes industry-leading smart locking solutions. Whether you're exploring your first upgrade, optimizing an existing system, or planning a new build, our goal is to get you started on the right path from day one.

Leading this effort is Nick Noethe, our Smart Locking Solutions Representative. With deep product knowledge and hands-on experience, Nick works directly with customers to identify the best lock for each facility's needs—balancing security, ease of use, and long-term performance.

PTI SECURITY SYSTEMS ProEdge Smart Latch

- **Backed by a Global Leader** - Supported by ASSA ABLOY, PTI delivers commercial-grade security and long-term reliability, leveraging decades of global access control expertise.
- **Self-Healing Mira Mesh Network** - If ever a network path is blocked, ProEdge immediately locks on to the next most efficient path for greater uptime.
- **Operational Clarity** - Lock status, battery health, connectivity, event activity. Real time visibility that offline devices cannot provide.
- **Tenant Flexibility** - With Phoneless Mode, tenants enter their normal access code at the keypad and press the lock button. Simple. Secure. No phone or app required.

OpenTech Alliance™ INSOMNIAC SmartLock

- **Fully Unified Ecosystem** - Combines smart locks, gate access, property sensors and tenant apps under a single, connected platform (IoT) to streamline facility management and automate rentals.
- **Extended Network** - Provides edge-to-edge wireless network connectivity with three open channels to support smart property sensors of your choice and public/private internet access.
- **Tenant-Centric Experience** - Mobile app and keypad-based access with on-lock authentication and key code sharing enhance convenience and reliability to simplify the access experience.
- **Supports Unmanned Operations** - Pairs with OpenTech's kiosk solutions to enable rentals, payments, lock sales, and move-ins with minimal on-site staffing.

KISS ONELock

- **NFC Technology** - The same trusted technology behind Apple Pay, Visa, Ticketmaster, and more.
- **Battery Free Design** - NFC powered locks eliminate the need for in-unit batteries, reducing maintenance and long-term service costs.
- **Simplified Installation** - No additional infrastructure required, allowing for a straightforward deployment and self-installation.
- **Retrofit & New Construction Friendly** - ONELock's minimal infrastructure requirements help simplify implementation for both new and existing facilities.

All three of these systems bring modern, connected technology to self-storage access and security. These innovative smart lock platforms replace traditional padlocks with secure, wireless, cloud-managed solutions that enhance both the tenant experience and operator efficiency. With mobile access, remote management, and real-time visibility, they help facilities streamline operations, strengthen security, and deliver a seamless, modern customer experience.
